

Hosting Multiple Websites on Mobile me from GoDaddy

Apple has made it simple to redirect and mask a single domain name to your Mobile me account. Unfortunately, if you want to host multiple sites, you have to jump through quite a few unintuitive hoops.

This procedure is tailored for GoDaddy users, but could be useful to others as well.

Follow the instructions ACCURATELY!

- 1) Log into Mobile me.
- 2) Click on the **Settings** icon. 
- 3) Enter your Mobile me password.
- 4) Click on the **Personal Domain** icon.  Personal Domain
- 5) Remove any domain you may have added here.
(Yes, really remove it.)
- 6) Open iWeb and make a small change to the home page of the websites you want hosted.
Save from the **File menu**.
- 7) **Publish to Mobile me** from the **File menu**.
- 8) Click on your site name and select **Visit Published Site** from the **File menu**.
- 9) Once the site opens in your browser, copy the contents from the URL address bar.
- 10) Open a text editor and paste the URL you just copied. **DELETE THE http://**
- 11) Repeat steps 8 through 10 for any other websites you want to add to Mobile me.
- 12) **Login** to your GoDaddy account.
- 13) Under “My Products”, click on **Domain Manager**.
- 14) Click on the domain name you want to configure.
- 15) Under “Total DNS”, click on the Total DNS Control link.
- 16) Expand the **CNAMEs (Aliases)** column and look for “www”.
On the far right you will see an Edit icon. 
- 17) Click on the **Edit** icon and make the following changes.

Enter an Alias Name:	Points To Host Name:
<input type="text" value="www"/>	<input type="text" value="@"/>
- 18) Click **OK**.
- 19) Click on the **Forward icon**.  Forward
- 20) Copy the website URL you copied from Step 9 above.
- 21) Click on the [Edit](#) link.
- 22) Paste the contents into the field
- 21) Click on the [Advanced Options](#) link.
- 22) Select **Forward with Masking**.
(You may include keywords and other useful MetaData here also.)
- 23) Click **OK**. Click **OK** again.
- 24) Click on the **Domains** Tab.
- 25) Repeat Steps 15 through 23 for any other domains you want to add.
- 26) You may have to wait 15 minutes to an hour for all these changes to work.
