is there a way is there an APP by which I can take a partial (Selected area) or a full screen screenshot of the webpage ?

#1

For partial screenshot I know I can take a screenshot of the entire area and then crop it but I am looking to minimise steps a way to directly do it on the webpage using an APP or something !

 Sweden

Try zoom the webpage, then take screenshot. Of course it depends on why you want a partial screenshot.

Full webpage:

Print to PDF. Use the share sheet and select print. Then when the print dialog comes up, use two finger pinch to zoom in to full page view. Then a new share sheet icon will appear and you can save as PDF to Dropbox or iCloud or Documents, etc

Partial Screen shot:

This will be natively supported in iOS 11 but for now you can take a regular screen shot and then go in to Photos and edit the screen shot by cropping it. Or you can use whatever phot editing app you like best to crop, smudge out identifying info, etc. I know that's not what you wanted to hear, but like I said that one-step native functionality is coming in iOS 11.
